(8) Adolescence	(17) Environmental factors	
(9) Schizophrenia	(18) Children Apperception Test	

(٤٠ درجة)

ثانياً: - ترجم الفقرات الآتية إلى اللغة العربية :

1. "The individual's perception of his own feelings, attitudes, and ideas is more valid than any outside diagnosis can be."
2. "The individual's perception of himself determines how he will behave. He responds in such ways as to be consistent with himself."
3. "Every individual wants to grow toward self-fulfillment. His point of view may seem illogical to others when he is not understood."
4. "We cannot teach another person directly. We can make learning for him possible by providing information, the setting, atmosphere, materials, resources, and by "being there". When free from threat the self is more open and strive for actualization."
5. "When evaluating or comparing subjects, two kinds of abilities are considered: verbal ability and problem solving ability."
6. "Abnormal behavior is defined as to be maladaptive or deviant by the social culture in which it occurs. It may also be defined based on the subjective feelings of misery, depression or anxiety of an individual rather than any behavior he exhibits."
